

Thank you for your support in buying this product.

–VengeanceMK1

INTRODUCTION:

This is an UI made for MMORPGs/RPGs with a Japanese theme style. The idea behind it was to create a graphical interface that gives you an oriental feel. Needless to say it should fit games that are based on the old Japanese clan wars from history or a fantasy game that includes samurai.

V2: This is the second version of it, which is an improvement on quality.

BEHIND THE DESIGN:

- In this release it's just improving the quality with the same ideas in mind. Just focusing more on the oriental ornaments and more use of cloths.

PSDs:

There are many PSD elements in both the new and the old version, which all are included. But for the new version:

[Created Resources Folder] PSD and PSB files, which feature lots of resources created or modified from the old Yamato to fit in the newly improved version.

[Main PSDs] Featuring 7 parts of PSD files. They are separated to avoid slow PC from choking on a huge file. Content is as follows...

OTHER PSDs:

The new Logo “version 2” Is Included this time in somewhat unmerged form. Use it if you want. Just note that the text is modified, so you have to type something using the YAMAMOTO font and give it similar effects.

OTHER FOLDERS:

Fonts are in “Fonts”. Also the sliced UI parts are in folder “Sliced”. Sliced v2 is the new UI sliced.

OTHER INFORMATION:

- When coding this, pay attention to the styles of the text and other elements.
- Pay attention to the opacity of both fonts and other elements, also groups.

- Before editing the UI install the fonts.

Free Fonts Used for this UI (included):

Cabin (Old UI)

Kompani (Old UI)

Yama Moto (The Logo)

Cambria (The New UI)

NOTE:

Thanks for all the purchases so far of this product, I have thought not to lower the price to 35\$, but I changed my mind, however before you explode in anger for the lowering of the price by 5\$ (if you bought it for 40\$), do keep in mind that I did give you a better quality product as a compensation.

NOTE 2:

If you need help with this product or have questions my email is warcl0ck@yahoo.com
